Washing instruction	<ul style="list-style-type: none"> • 100x wash at 60°C (140°F) • 30x wash at 92°C (198°F)

This Flame Resistant reflective piping is made of XM-6010 FR tape. XM-6132 has been developed for FR-clothing where reflective piping is used for enhanced design and visibility.

It is important to understand, that due to its narrow width, FR-piping can not be certified to High Visibility standard.

XM-6132 reflective piping is to be sewn into the seams of FR jackets, trousers or overalls. It increases visibility of the wearer in the day and night.

This Reflective Material is a Cotton Fabric coated with a layer of resin with numerous glass micro-lenses impregnated with a special glue into this layer. The light reflects from these micro-lenses and comes back to a car (or other source of light) making the person wearing reflective tape more visible in the dark.

EN 20471

Available in many different colours.

XM SilverLine Reflective tapes and films will have longer life if you follow our care instructions.

Type of work environment, exposure conditions and maintenance have an impact on reflective performance.

Please test each tape according to appropriate care instructions required for the garment.

High-visibility clothing made with reflective material should be maintained in good condition and inspected regularly for damage or deterioration.
